number of pallets and the number of mbf of lumber to produce each day. Thus, the decision variables will be:
 P = the number of pallets to produce each day, and. L = the number of mbf of lumber to produce each day.

Basic Classes of Linear Operators. The present book is an expanded and enriched version of the
text Basic Operator Theory, written by the first two authors more than twenty years ago. Since then the three
of us have used the basic operator theory text in various courses. This experience motivated us to update and
improve the old text by...

A linear program is in canonical form if it is of the form: Max $z = c^T x$ subject to: $Ax \leq b, x \geq 0$: A linear program in
canonical form can be replaced by a linear program in standard form by just replacing $Ax \leq b$ by $Ax + Is = b, s \geq 0$
where s is a vector of slack variables and I is the $m \times m$ identity matrix.
