In fact, embedded systems are one of the most rapidly growing segments of the computer industry today. Along with the growing list of devices for which embedded computer systems are appropriate, interest is growing among programmers, hobbyists, and engineers of all types in how to design and build devices of their own.

He has been designing embedded systems since the early days of microcontrollers. For many years this was for Cambridge University, where he led a development team building original systems for research applications – for example in measurement of bullet speed, wind tunnel control, simulated earthquakes, or seeking a cure to snoring.

Characteristics of Embedded Systems (3) Many ES must meet real-time constraints! A real-time system must react to stimuli from the controlled object (or the operator) within the time interval dictated by the environment! For real-time systems, right answers arriving too late (or even too early) are wrong.
