Automated Dynamics is a world leader in the design of automation equipment for composite part production; we build right-sized, automated fiber placement (AFP) and automated tape laying (ATL) equipment for thermoset and thermoplastic applications. Tailored Solutions Our facility operates several AFP and ATL machines daily. This equipment is available for demonstration, prototyping, and ...

Automated Dynamics's™ industry-proven technologies are integrated into every machine we build. Our knowledge and experience guarantees we can meet each client's™ performance requirements with cost-effective solutions. Automated Fiber Placement Process Automated Fiber Placement (AFP) is traditionally used on complex surfaces and smaller structures.

ANSYS Fluent is a powerful computational fluid dynamics software package used to model flow, turbulence, heat transfer, and reactions for industrial applications. ANSYS Fluent is integrated into ANSYS Workbench.

### **ANSYS Fluent Software | CFD Simulation**

Inverse dynamics is an inverse problem. It commonly refers to either inverse rigid body dynamics or inverse structural dynamics. Inverse rigid-body dynamics is a method for computing forces and/or moments of force (torques) based on the kinematics (motion) of a body and the body's inertial properties (mass and moment of inertia). Typically it uses link-segment models to represent the mechanical ...

### **A Systemic Approach to Ending Homelessness**

A classic, extensively studied nonlinear problem is the dynamics of a pendulum under the influence of gravity. Using Lagrangian mechanics, it may be shown that the motion of a pendulum can be described by the dimensionless nonlinear equation  $\ddot{\theta} + \sin \theta = 0$  where gravity points "downwards" and  $\theta$  is the angle the pendulum forms with its rest position, as shown in the figure at right.
