Let O be a subset of the power set $P(X)$ such that the following properties are true: 1. $\hat{\cdot} \dots \hat{\cdot} O, X \hat{\cdot} O$. 2. The intersection of a finite number of sets in O belongs also to O . 3. The union of any number of sets in O also belongs to O . The elements of O are then called the open sets of X with respect to the topology $T = (X, O)$.

The two theorems lead to the fundamental statement of density functional theory; $d[E[r] \hat{\cdot}^m(\hat{\cdot} \ll r(r) dr \hat{\cdot}^N)] = 0$. Equation 13. The ground state energy and density correspond to the minimum of some functional $E[\hat{\cdot}]$ subject to the constraint that the density contains the correct number of electrons.

An Introduction to Density Functional Theory

A characteristic feature of functional programming is that if an expression possesses a well-defined value, then the order in which a computer may carry out the evaluation does not affect the outcome. In other words, the meaning of an expression is its value and the task of the computer is simply to obtain it.

EUC control system: system which responds to input signals from the process and/or from an operator and generates output signals causing the EUC to operate in the desired manner. EUC risk: risk arising from the EUC or its interaction with the EUC control system, i.e. the risk associated with functional safety.
