Several Complex Variables

The theory of functions of several complex variables is the branch of mathematics dealing with complex valued functions (z, \dots, z_n) on the space \mathbb{C}^n of n -tuples of complex numbers. As in complex analysis, which is the case $n = 1$ but of a distinct character, these are not just any functions: they are supposed to be holomorphic or complex analytic, so that locally speaking they are power series in ...

4 Sara W. Lapan Theorem 0.18. We can choose an R -basis such that Q can be replaced by: $0 @ I n + 0 0 0 0$
 $n 0 0 0 0 I n 1 A$. Also, $n + + n 0 = \max \dim E_j Q 0$ on E_g and $n + n 0 = \max \dim E_j Q 0$ on E_g . This is also true if Q is C -Hermitian.

theory of several complex variables are the features that differ from the one-dimensional theory. The one-dimensional theory is illuminated by several complementary points of view: power series, integral representations, partial differential equations, and geometry.
