Introduction. Molecular motors use chemical energy and transform it into work, orchestrating myriad processes inside a cell. They are examples of active matter, i.e. entities that stay out of thermodynamic equilibrium by consuming energy in the environment (or internally stored) in order to move []. There is a growing interest in creating synthetic analogues, not only to reveal and understand ...

The first-order approximation to the solution of the Boltzmann--Curtiss transport equation is derived. The resulting distribution function treats the rotation or gyration of spherical particles as an independent classical variable, deviating from the quantum mechanical treatment of molecular rotation found in the Wang Chang-Uhlenbeck equation.
