54 12 PROPELLERS AND PROPULSION T_o and Q_{po} are values for the in-flow speed U_p , and thus that o is the open-water propeller efficiency at this speed. It follows that $T_o(U_p) = T_{sp}$, which was used to complete the above equation. The quasi-propulsive efficiency can be greater than one, since it relies on the towed resistance and in general $R_t \dots$
