

the z factor the pdf

The Z-factor is a measure of statistical effect size. It has been proposed for use in high-throughput screening (where it is also known as Z-prime, and commonly written as Z') to judge whether the response in a particular assay is large enough to warrant further attention.

Z-factor - Wikipedia

Chapter 1 Theoretical Introduction â€ Factor analysis is a collection of methods used to examine how underlying constructs influence the responses on a number of measured variables. â€ There are basically two types of factor analysis: exploratory and confirmatory. â€ Exploratory factor analysis (EFA) attempts to discover the nature of the constructs influencing

Types of factor analysis. Exploratory factor analysis (EFA) is used to identify complex interrelationships among items and group items that are part of unified concepts. The researcher makes no a priori assumptions about relationships among factors.. Confirmatory factor analysis (CFA) is a more complex approach that tests the hypothesis that the items are associated with specific factors.
